DETAILED ACTION

1. According to paper filed on Dec. 7, 2007, the applicants have elected group I without traverse for further prosecution.
2. Claims 1-14 are pending in the application. Claims 6-8 are withdrawn from further consideration as being drawn to non-elected group.

Specification

3. The abstract of the disclosure is objected to because it is too long. Correction is required. See MPEP § 608.01(b).

Claim Objections

4. Claim 4 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in alternate only. See MPEP § 608.01(n). In the instant case, claim 4 depends upon claim 1 as well as claim 3.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1, 2 and 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mathauer (U. S. Patent 6,727,318).

Mathauer discloses method for producing aqueous polymer dispersions containing colorants. The dyes 16, 17a and 17b disclosed in columns 42 and 43 by Mathauer meet all the limitations of instant claims except that perylene-3,4-dicarboxylic monoimide is substituted at 9th position with alkyl or phenyl group instead of instant CN group.

However, the generic teachings of Mathauer (see column 10, lines 40-63) suggest this interchangeability for CN group at this position for variable R6. Therefore, it would have been obvious to one skilled in the art to prepare the instant 9-cyano-substituted perylene-3,4-dicarboxylic monoimide dyes with reasonable expectation of success since Mathauer suggests this interchangeability.

Allowable Subject Matter

8. Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charanjit S. Aulakh whose telephone number is (571)272-0678. The examiner can normally be reached on Monday through Friday, 8:30 A.M. to 5:00 P.M..
